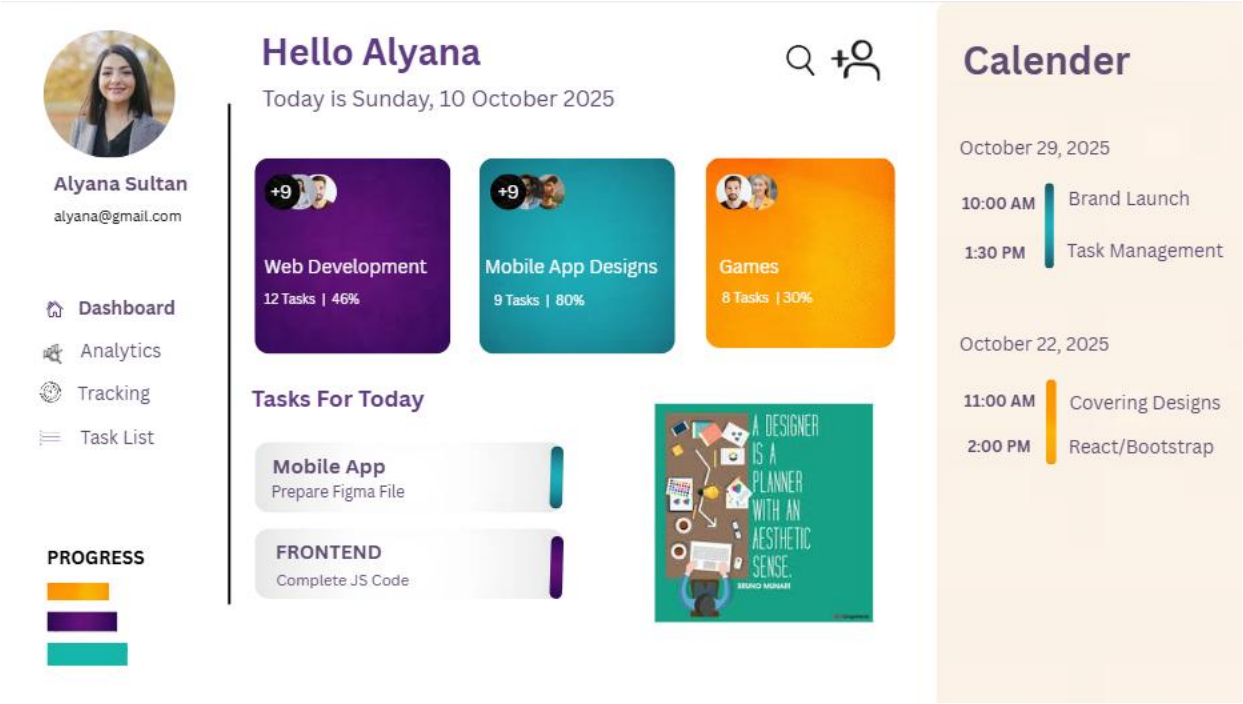
AYESHA FAISAL

Design Portfolio

- **Profile Dashboard:**

  A central hub to track your tasks, progress, and active projects at a glance.



- **Educational Landing Page:**

  A welcoming gateway to discover courses and begin your learning journey.

- **Restaurant Ad:**

  A visual appetizer designed to evoke craving and draw you in for a meal.

- **Event Mood Board:**

  A curated collection of visuals that defines the atmosphere and tone of the event.

PROCOM’26

At **PROCOM’26**, we organized a UI/UX design competition centered around the theme **“Multiverse.”** Participants were challenged to design innovative solutions for fictional clients that we created as part of the concept. To spark creativity, we designed unique client cards representing different characters and scenarios from parallel universes—here are some of them.

PROCOM'26

DESIGN DASH PIXELVERSE

UNIVERSE: AETHERIA

Planet: Elios

Floating islands wrapped in soft clouds

Where sky, light, and calm guide every journey

CORE MISSION:
Design an interface that enables users to send, track, and manage messages between floating villages, ensuring clarity and ease of use as new users and destinations are introduced.

Personality Cues:

- Prefers open spaces and freedom of movement
- Avoids noise and chaos
- Notices small changes easily
- Dresses in light, airy tones
- Dislikes rushed or sudden actions

Meet Luna

(Role: A Sky Messenger who travels) between floating villages above the clouds. Luna's purpose is to keep communities connected, delivering messages and guidance wherever they are needed.

Note: The universe and character details are for narrative context only. Focus on the app's purpose, users, and design constraints.

I'M LUNA FROM AETHERIA

My message transfer system was once used by a small group of familiar users. It is now accessed by many new and first-time users. This user-based change requires the interface to support mixed experience levels while staying clear, calm, and easy to use.

Your Tasks

- Design for new and experienced users
- Keep the interface clear and easy to understand
- Reduce confusion for first-time users
- Maintain a calm and organized layout
- Ensure smooth message transfer for everyone

Goal

Users of all experience levels should feel comfortable and confident using the system on Elios without feeling overwhelmed.

DESIGN DASH
PIXELVERSE

UNIVERSE: TEMPUS

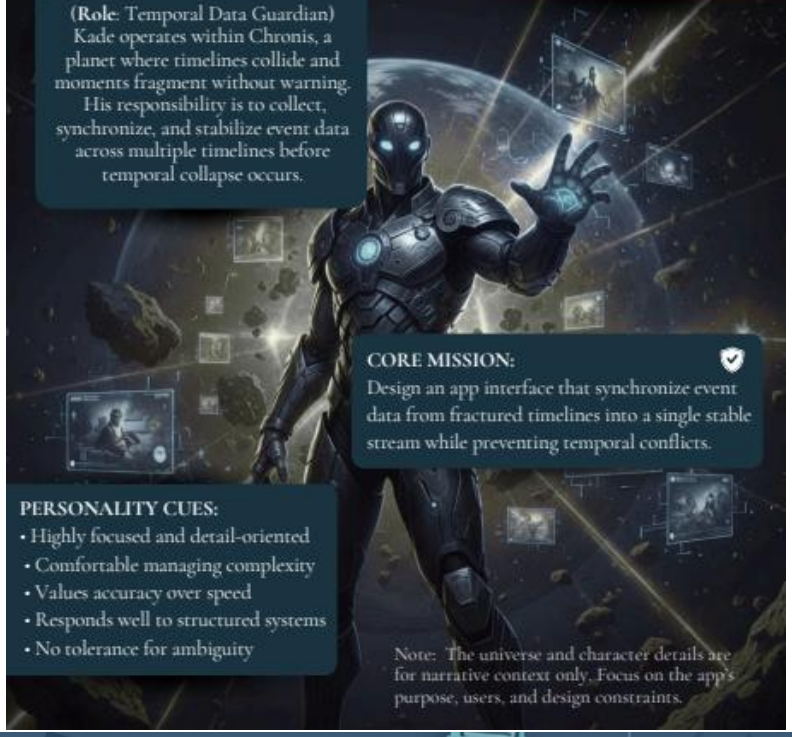
Planet: Chronis

Fractured in Time.
Time is never fixed - where every moment matters

In this universe, delays, inconsistencies, or missed events can permanently corrupt the system.

Meet Kade

(**Role**: Temporal Data Guardian)
Kade operates within Chronis, a planet where timelines collide and moments fragment without warning. His responsibility is to collect, synchronize, and stabilize event data across multiple timelines before temporal collapse occurs.



CORE MISSION:
Design an app interface that synchronize event data from fractured timelines into a single stable stream while preventing temporal conflicts.

PERSONALITY CUES:
- Highly focused and detail-oriented
- Comfortable managing complexity
- Values accuracy over speed
- Responds well to structured systems
- No tolerance for ambiguity

Note: The universe and character details are for narrative context only. Focus on the app's purpose, users, and design constraints.

I'M KADE FROM TEMPUS

Time on Chronis has fractured further—now past, present, and future data are visually indistinguishable in the timeline stream. This visual overlap is causing critical synchronization errors and temporal conflicts.

Your Tasks
- **Visually distinguish between past, present, and future data streams**
- **Prevent overlapping of temporal layers in the interface**
- **Add clear visual cues for timeline boundaries**
- **Ensure users can merge or separate temporal data without confusion**
- **Maintain structured navigation despite visual complexity**

Goal

Users must be able to clearly identify and manage data from different timelines without synchronization failures.

DESIGN DASH
PIXELVERSE

UNIVERSE: VOIDRETH

Planet: Dreadholt

Buried knowledge stays buried

Where evil exists without escape

Personality Cues:

- Avoids attention and public exposure
- Prefers enclosed, protected spaces
- Trusts very few people
- Wears deep, muted colors
- Values control and caution

CORE MISSION:
Design an interface that enables users to securely transfer and manage top-secret messages, ensuring that confidential information remains protected and accessible only to authorized users.

Meet Mora

Mora lives alone on Dreadholt, guarding confidential knowledge that could empower evil forces if leaked. She passes confidential data that can only be accessed by those who she sents it to . One mistake could change the balance of her universe

Note: The universe and character details are for narrative context only. Focus on the app's purpose, users, and design constraints.

I'M MORA FROM VOIDRETH

My system now supports both top-secret information and casual communication with trusted friends. This functional change has created confusion between secure and non-secure messages, making clear separation essential.

Your Tasks

- **Clearly separate secure (top-secret) and casual communications**
- **Visually highlight sensitive messages**
- **Make message type clear at first glance**
- **Prevent confusion between secure and non-secure message flows**
- **Ensure casual use does not compromise security**

Goal

Users should confidently communicate on Dreadholt while instantly knowing whether a message is top-secret or casual, without any risk of confusion.

DESIGN DASH
PIXELVERSE

UNIVERSE: NEON RIFT

Planet: Fluxara

A digital universe where data moves at the speed of light.

Where data never sleeps and every signal matters.

CORE MISSION:
Design an app interface that enables users to monitor, transfer, and secure unstable data between nodes during system failure.

Meet Nyx

A Neon Navigator who operates inside high-energy data streams of Fluxara. Nyx's role is to route, visualize, and optimize real-time data flows across interconnected systems.

Nyx helps users monitor live activity, identify bottlenecks, and keep information moving smoothly inside the application.

PERSONALITY CUES:
- Thrives in fast-paced area
- Prioritizes speed with clarity
- Reacts instantly to changes
- Prefers bold visuals and sharp contrasts
- Dislikes delays or static information

Note: The universe and character details are for narrative context only. Focus on the app's purpose, users, and design constraints.

I'M NYX FROM NEON RIFT

My system was built for fast, real-time data flow across interconnected nodes.Due to recent system instability, data streams may interrupt, fail, or disconnect without warning.
This system-level change requires the interface to help users monitor, recover, and stay in control without slowing down the experience.

Your Tasks
- **Show system status and data flow clearly**
- **Indicate interruptions without panic or clutter**
- **Help users understand what is active, paused, or failed**
- **Support recovery without restarting everything**
- **Keep the interface fast and responsive**

Goal
Users should feel confident managing data on Fluxara, even during instability, without losing speed or control.
